

Department of Philosophy

Cognitive Sciences and New Technologies

Duration: 1 month

Language of training: English

Supervisor: Prof. Natalia Tishchenko

e-mail: mihailovan@inbox.ru

Description

The social and humanitarian aspects of cognitive science combine emerging technologies based on their common components, such as atoms, genes (DNA), bits, and neurons. The aim of the course is to obtain competencies in the field of interdisciplinary research. The cognitive approach is important for the information society, and the analysis of its social consequences allows solving problems that cannot be solved by disciplinary science, as well as creating new technologies and knowledge.
